SiteSnap AI Quick-Start Guide

Take a picture. Say what you see. Your site walk is saved together.

SiteSnap AI keeps each photo, your voice note, and a written copy of your words together as a **stop**, and groups the stops into a **job**. It works with no signal: everything saves on your phone first and uploads when signal comes back.

YOUR FIRST JOB IN FIVE STEPS

1. **Tap Start New Job**
   The bar at the top shows the job your stops are saving to.
2. **Tap Take Photo**
   Take a picture of the spot you're looking at.
3. **Tap the Tap to Talk button and say what you see**
   Tap it again to stop. SiteSnap AI writes your words down for you.
4. **Tap Save This Stop**
   Repeat steps 2 to 4 at each spot on the site.
5. **Tap End Job when the walk is done**
   Add the customer and location, then finish. You get an AI summary to review and a PDF report to share.

TIPS FOR GREAT RESULTS

- **One stop per spot.** Photo first, then talk about that spot.
- **Say where you are first:** "Front entrance, east side."
- **Talk like you're briefing a coworker:** what you see, what's wrong, what needs to be done.
- **Give numbers:** how many, how far, how big.
- **Read model and part numbers slowly,** and spell letters that sound alike.
- **Keep notes short:** several short stops beat one long one.

GOOD TO KNOW

- **Before you go:** put SiteSnap AI on your home screen so it opens with no signal.
- **Quiet spot, phone close:** wind and running equipment make words harder to catch.
- **Check your words** before you leave the site and fix anything that came out wrong.
- **Use wrap-up notes** at the end for the big picture and what the customer asked for.
- **Review the AI summary** before you share the report.
- **Save your work** (sign in) so your jobs are kept.

Need help with something else? In SiteSnap AI, tap **?** at the top of the main screen and ask **Ask SiteSnap AI**, by typing or by voice: how to do something, what a message means, or tips for better results.
